

● W/S ◆ Hard ○ Not full-atom valid | Median

A Structurally valid outputs (%)

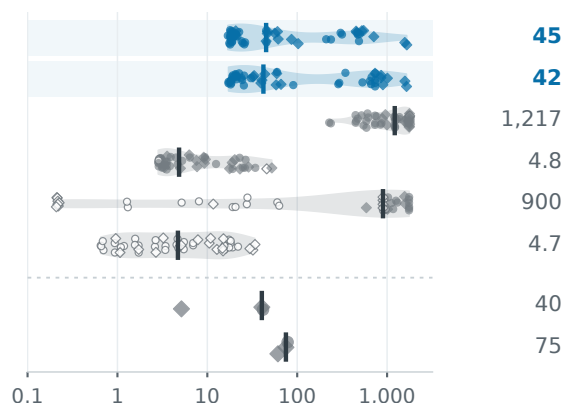

Fixed full-atom checks; passed / planned

B Computational time per input

CPU seconds (log scale); failures included

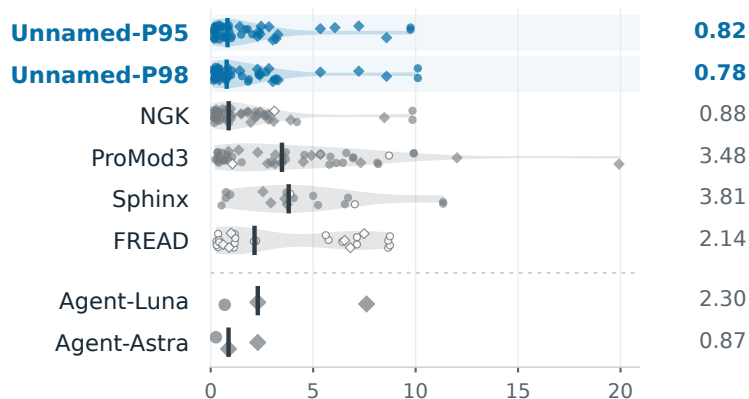

Median

C Local RMSD (Å)

Available endpoints; common CA alignment

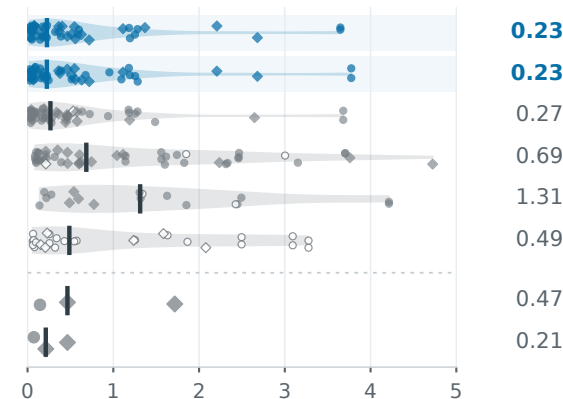

Median

D Global RMSD (Å)

Available endpoints; common CA alignment

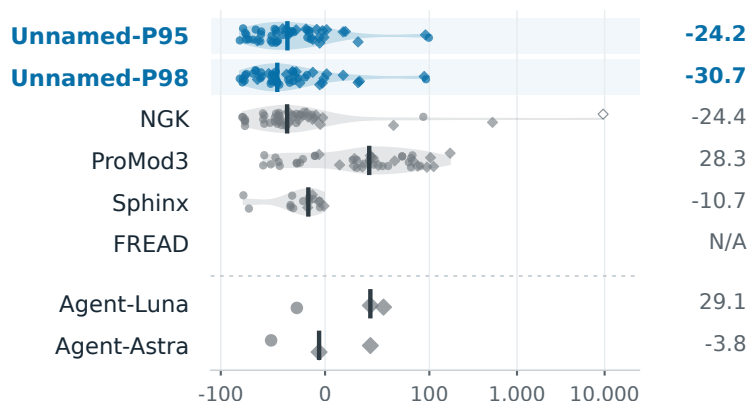

Median

E Local energy (REU)

Symmetric log scale; all extremes retained

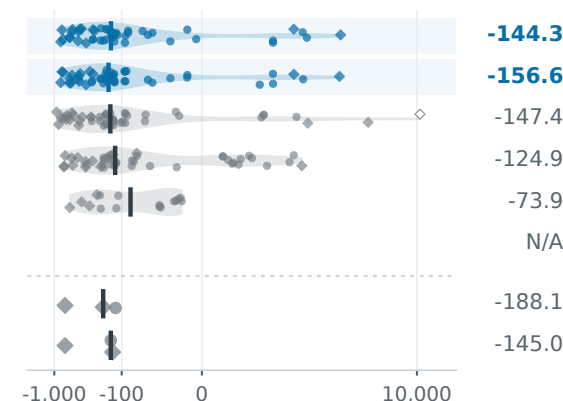

Median

F Global energy (REU)

Symmetric log scale; all extremes retained

Median

Quality medians use available endpoints; sample counts are in the caption. Agent rows: 3-input emergency deliveries.

CPU includes measured-cost reuse, excludes final scoring/MP and LLM wait. Timings are not hardware-controlled.

Agent model wait: Luna 74-231 s; Astra 767-895 s/input. ProMod3: full native pipeline.

Sphinx: adapted reproduction (MSL sidechains). FREAD: rebuilt library; no full-atom energies. Details: caption.
